ONVIF NVT Software Stack

Lingodigit's ONVIF NVT software stack enables manufactures of network cameras and video servers to quickly release ONVIF compliant products. The stack implements the following services of an Network Video Transmitter (NVT) defined by ONVIF Core Specification v2.0:

- Device Discovery
- Device Management
- Media Configuration
- Relay Output Control
- PTZ control

ONVIF Network Video Client Compatibility

- ONVIF Test Tool v1.02.2.10
- Milestone XProtect Go!

The stack is available for Grand Media GM8180 SoC. We also provides customization service of porting the stack on specified platforms.

System Requirement

- Linux OS
- An HTTP server supports CGI
- An RTSP server supports UDP, TCP, and HTTP tunneling

Are your product only compliant to old ONVIF Test Spec.?

In *ONVIF Test Specification v1.02.2*. ---

"... This ONVIF Test Specification v1.02.2 replaces the previously released version 1.02. As of 2010-12-29 ONVIF members shall only declare conformance of a product with ONVIF specifications with reference to this Test Specification version 1.02.2. "
